Haresh LS

AI Full-Stack Engineer

+91-9514461616 | hareshls56@gmail.com | github.com/Hareshls | linkedin.com/in/hareshls

Summary

AI Full-Stack Engineer skilled in the MERN stack and LLM application development using FastAPI, Llama 3.3, RAG pipelines, and FAISS. Built and shipped four end-to-end AI products spanning prompt engineering, vector search, and responsive user interfaces. MongoDB Certified Associate Developer and Oracle Certified Foundations Associate in Agentic AI, seeking to grow as an AI Full-Stack Engineer on product-focused teams.

Experience

Frontend Developer Intern *June 2025 – October 2025*

Cube AI Solutions

- Developed responsive frontends for four real-time projects using React.js, JavaScript (ES6+), HTML5, and CSS3, ensuring consistent performance across devices and browsers.
- Crafted pixel-accurate UI components directly from Figma design specs across all deliverables.
- Integrated the frontend with backend REST APIs, ensuring smooth and reliable data flow across the application.
- Optimized page load speed and rendering performance, improving overall responsiveness and user experience.

Projects

CareerLens AI [GitHub]

AI-powered career optimization and resume analysis tool

- Built an eight-step AI pipeline covering PDF parsing, job classification, few-shot retrieval, prompt engineering, LLM analysis, and JSON validation, producing match scores, skill-gap analyses, and ATS-optimized resume bullets in under 60 seconds.
- Technologies Used: React.js, FastAPI, Llama 3.3 70B.

ContractIQ [GitHub]

Intelligent Contract Risk Analysis and RAG-Based Legal Assistant

- Built a clause-level risk-scoring engine using LLM reasoning and a RAG pipeline with FAISS, retrieving similar clauses from a reference corpus to ground risk scores in real precedent and produce a calibrated 0-100 score with plain-English explanations
- Technologies Used: React.js, FastAPI.

SpendMind [GitHub]

Full-stack expense tracking application

- Built category-based expense logging with auto-generated interactive charts for real-time spending visualization.
- Technologies Used: React.js, Node.js, Express.js, MongoDB.

RAG Document Q&A System [GitHub]

Retrieval-Augmented Generation pipeline for context-grounded document Q&A

- Built a complete ingestion pipeline for PDF parsing, chunking, embedding generation, and FAISS vector storage, delivering context-grounded responses designed to minimize hallucinations.
- Technologies Used: FastAPI, FAISS, Python.

Technical Skills

Languages: Java, JavaScript, Python
Frontend: React.js, HTML5, CSS3
Backend: Node.js, Express.js, FastAPI, REST APIs, JWT Authentication
Databases: MongoDB, SQL
AI/LLM: Prompt Engineering, LLM Integration (Llama 3.3), RAG Pipelines, Vector Search (FAISS)
Developer Tools: Git/GitHub, Postman, VS Code, Figma
Soft Skills: Leadership, Team Collaboration, Communication, Time Management, Adaptability

Education

Bachelor of Technology in Computer Science and Engineering *2022–2026*
Kongu Engineering College, Perundurai, Erode CGPA: 6.82/10

HSC (Class 12) *2022*
Vedhha Vikass HR Sec School, Salem 86.16%

SSLC (Class 10) *2020*
Montfort School Anglo Indian, Salem 63.2%

Positions of Responsibility

Media Head, Department Association, Kongu Engineering College *June 2023 – April 2026*

- Led the media team and managed brand presence and visual storytelling across college-wide events and initiatives.

Certifications & Achievements

MongoDB Certified Associate Developer — NoSQL database design, schema modeling, and query optimization
Oracle Certified Foundations Associate — Agentic AI — Oracle University, recognized by Oracle Corporation*Aug 2026*
1st Prize & Best Paper Award — Machine Learning paper presentation, CIT Coimbatore
